

ROBOTIC AND LESS INVASIVE CARDIOVASCULAR SURGERY

Director: Dr. Eduard Quintana Dr. Eduard Pereda

Duración: 1-12 meses

This course is offered to certified cardiovascular surgeons. The aim is to provide immersion to less invasive approaches used currently in cardiovascular surgery. .

PROGRAMA

The program will be held at the Department of Cardiovascular Surgery at Hospital Clínic de Barcelona-University of Barcelona.

This Course will focus on preoperative patient evaluation, selection of candidates for less invasive surgeries, operative techniques and postoperative management.

Includes the following operations performed at our department:

- Surgical aortic valve replacement through partial sternotomy
- Mitral and tricuspid valve surgeries (repair or replacement), atrial septal defect repair, tumor excision, Cox maze performed either thoracoscopically (Port Access) or Robotically
- Minimally invasive coronary surgery through limited left thoracotomy (LIMA-LAD and multivessel arterial CABG)
- Robotically assisted CABG
- Robotically assisted surgical aortic valve replacement
- Minimally invasive implantation of temporary and long term mechanical circulatory support
- Thoracoscopic pulmonary vein ablation and left atrial appendage occlusion
- Surgery of the proximal aorta

Learning objectives: - Understand potential indications and contraindications to less invasive approaches. Learn techniques commonly used. Direct operative experience as primary operated will not be provided but participation as observer in the operations is possible.

REQUISITOS

Aportar copia legalizada original del título de Cardiología. (Los títulos académicos expedidos por autoridades no españolas, deberán venir legalizados mediante apostilla o legalización diplomática. La compulsión de una copia no exime de la legalización del título)

-Disponer de un seguro de salud, muerte y accidentes (lo puede contratar en su país de origen o en España)
